

## Title:

Easily create pdfs out of HTML

## It's pretty easy

### 1. Create lists

- This is the first list item.
- And of course this is the 2nd.

### 2. I am a list item outside of the original list....

## Using AI

It would take me a lot of hours building this simple functionality. First of all I would have to read a lot of the docs of Puppeteer It is pretty great being able to bring our ideas faster to life with tools that use AI to generate code.
